

Curbside

Non-Confidential Executive Summary

curbsidescore.com | Joshua Keoshkerian | (314) 520-9265

Business Summary

Founded in 2026, Curbside is building the buying platform for the private-party used-car market: one place to compare vehicles, negotiate, arrange inspections, and connect with financing and secure transaction services.

Our entry product is a Chrome extension that compares asking prices directly across Facebook Marketplace listings and combines price, risk, and negotiation guidance in an explained score out of 100. Facebook Marketplace is the starting point; our roadmap extends to Craigslist, OfferUp, and other vehicle-listing platforms.

Our ambition is to become the buyer's companion across marketplaces and throughout the purchase. Consumer payments establish the first revenue stream; inspection and financing partnerships, credit-union integrations, and software licensing create paths to recurring business revenue.

Customer Problem

Private-party buyers make a major financial decision with incomplete information. Listings can omit important details, asking prices are difficult to compare, and inexperienced buyers may struggle to recognize warning signs or negotiate.

Buyers must also coordinate vehicle history, inspections, financing, and purchase logistics across separate services. This burden particularly affects students, first-time buyers, and budget-conscious households that depend on reliable transportation.

Curbside turns scattered listing information into a shortlist, a negotiation position, and a clear next step. A paid shopping pass is designed for the concentrated period when buyers are comparing their options.

Product/Services

The working extension compares Facebook Marketplace asking prices, adjusting for characteristics such as mileage and trim, and saves evaluations for a shortlist. Planned support for additional marketplaces will let buyers compare opportunities across platforms. Asking prices are not completed sale prices, and evaluations do not replace inspections.

The next stage connects evaluations to inspection booking, financing, and secure transactions through providers. Credit unions and automotive platforms could embed Curbside's tools in their own customer experience. Additional platform support and provider integrations are planned, subject to access rights and agreements.

Implemented capabilities include listing capture, evaluation, accounts, saved results, and payment integration code. Internal testing found 15.3% median absolute percentage error across 4,133 held-out asking-price predictions and 38% overall verdict agreement across 72 labels from one reviewer. Independent validation remains necessary. [1]

Curbside owns its intellectual property, including its original software, evaluation methods, and proprietary know-how.

Operating priorities include platform permissions, privacy, data rights, and specialist review of future financing and transaction arrangements. Referral compensation must be disclosed and kept separate from evaluation scores.

Target Market

Curbside’s U.S. consumer market model uses 38.5 million annual used-vehicle purchases, Cox Automotive’s September 2026 forecast, as a proxy for buying episodes. [2] At \$42 average spend per paying episode, the long-term TAM is \$1.617 billion annually. This includes eventual expansion beyond the initial private-party segment.

Market	Annual episodes	Spend per payer	Revenue potential
TAM	38,500,000	\$42	\$1.617 billion
SAM	9,625,000	\$42	\$404.25 million
SOM in 2029	100,000	\$42	\$4.2 million

TAM, SAM, and SOM below measure consumer software revenue, not vehicle transaction value. SAM assumes 25% of buying episodes are digitally researched private-party purchases serviceable after platform expansion; this is a management sizing assumption. SOM targets 100,000 annual paying customers by 2029, about 1.04% of SAM. Partner and licensing revenue are additional opportunities outside these estimates.

Customers

Initial customers are active private-party shoppers, especially first-time buyers and households seeking value. A buyer comparing multiple vehicles can use Curbside to assess alternatives, prioritize inspections, and prepare an offer.

Expansion customers include shoppers on Craigslist, OfferUp, and other listing platforms, followed by credit unions and automotive businesses seeking embedded buying tools.

Sales/Marketing Strategy

We will launch in the hottest U.S. used-car sales metro at rollout, selected by recent sales volume, turnover speed, and private-party listing density. We will screen 50 large metros, test acquisition in the top five, and concentrate the first launch in the strongest-performing market. The base-case rollout targets five metros in 2027, 15 in 2028, and 40 in 2029.

Local automotive creators, search advertising, buyer communities, and referrals will drive traffic to the website and Chrome Web Store. Launch content will demonstrate Marketplace comparisons;

additional platform support will broaden reach. Conservative assumes slower conversion; realistic is our execution target; optimistic assumes stronger distribution. All are projections.

Values below follow 2027 / 2028 / 2029, the first three full commercial years after 2026 development. Activation means a first completed evaluation. Annual paying customers = unique qualified visitors × activation × paid conversion. The realistic case reaches 100,000 payers from four million visitors in 2029.

Annual funnel	Conservative	Realistic	Optimistic
Qualified visitors	100k / 500k / 2m	200k / 1m / 4m	320k / 2.4m / 8m
Activation rate	20%	25%	25%
Activated shoppers	20k / 100k / 400k	50k / 250k / 1m	80k / 600k / 2m
Paid conversion	5%	10%	12.5%
Paying customers	1k / 5k / 20k	5k / 25k / 100k	10k / 75k / 250k
Marketing budget \$	20k / 75k / 240k	100k / 400k / 1.5m	150k / 1.125m / 3.75m

Marketing budgets cover advertising, creators, content, and referrals. Base-case spend per acquired payer is \$20 / \$16 / \$15, blending paid and organic channels. Market expansion depends on demonstrated conversion and delivery costs; no existing partner distribution is assumed.

Business Model

Proposed launch pricing: three free evaluations, a five-evaluation pack for \$19.99, a 20-evaluation pack for \$39.99, and a 30-day shopping pass with 50 evaluations for \$59.99. A 20% / 50% / 30% purchase mix yields \$41.99, rounded to \$42 average spend per payer. Pricing replaces the lower test offer in this plan and will be validated at launch.

The long-term model adds service-provider referral revenue and recurring software subscriptions and licensing for credit unions and automotive platforms. These channels extend monetization beyond a single consumer shopping period; contract revenue is excluded until pilot terms are established.

Curbside has no revenue or funding to date and no significant operating costs. The \$7,500 request funds initial validation. The 2027–2029 growth plan requires additional capital and revenue reinvestment as marketing, staffing, and platform coverage expand.

Competitors

Kelley Blue Book offers private-party valuations, CarGurus provides valuation tools and deal ratings, and CARFAX supplies vehicle-history reports. [3–5] CarScout directly competes through Marketplace comparable-listing searches and ranked alternatives. [7]

Curbside sells a coordinated buying workflow: listing comparisons, actionable questions, negotiation guidance, and a path to purchase services. The higher proposed price reflects that positioning; conversion tests will determine which packages buyers value.

Competitive Advantage

Curbside's advantage is the context it carries from listing discovery to purchase. Direct Marketplace comparisons provide the entry point; planned comparisons across platforms and purchase-service integrations would let a buyer keep the same shortlist and decision history throughout the process.

We intend to build compounding advantages through permitted buyer and inspection feedback, service integrations, and institutional distribution. These are development priorities, not established exclusive assets. Evaluation scores will remain independent of partner compensation.

Management Team

Joshua Keoshkerian, co-founder, studies Business Information Systems with minors in Mathematics and Computer Science at the University of Tulsa. He developed Curbside's working extension and evaluation engine. At the Federal Reserve Bank of Kansas City, he won first place in a bank-wide intern data visualization competition and presented analytical findings to executive leadership. At Royal Banks of Missouri, he reworked an anomaly-detection system that helped prevent over \$5,000 in fraudulent transactions. This experience supports Curbside's work translating complex data into useful buying guidance.

Ryan Calhoun, co-founder, is a National Merit Scholar studying Engineering Physics with a focus on Bioengineering at the University of Tulsa, with a 4.0 GPA. As a traffic engineering intern for the City of Sioux Falls, he used Excel to automate traffic-data analysis and support senior engineers' decisions. At The Mitographers, he prepared digital production files to reduce machine downtime and improve efficiency. His quantitative and mechanical experience supports product evaluation, while his roles as club soccer president, treasurer, and peer mentor demonstrate leadership.

The founders combine business analysis, software development, and engineering. University networks support early buyer research; automotive advisors and specialists in partnerships, security, and integrations will help address gaps as the platform expands.

Goals

Curbside seeks \$7,500 to validate premium pricing, improve evaluation reliability, and establish its first launch-market and partner pilots.

Within 90 days, we aim to interview 50 buyers, test the paid packages, and screen 50 metros. Within six months, we aim to launch in the selected market and define one provider or institutional pilot. The realistic commercial targets are 5,000 payers in 2027, 25,000 in 2028, and 100,000 in 2029, with platform expansion supporting growth.

Initial funds: \$2,500 for reliability and product improvements, \$2,000 for market and pricing tests, \$1,500 for partner-pilot development, and \$1,500 for specialist advice and contingency. This 2026 validation budget precedes the full commercial projections and does not fund the entire expansion.

Financials (\$ US)

The 2027–2029 consumer projections follow the sales funnel and proposed pricing above. Revenue = annual paying customers × \$42, with no assumed subscription renewal. The realistic case reaches \$4.2 million annual revenue and \$900,000 operating profit in 2029. These are execution targets, not actual results.

Variable costs assume \$1 per activated shopper for evaluation delivery, including free use, plus \$2 per payer for payment and refund costs. Fixed budgets cover staffing and contractors, hosting, administration, and platform development. All cost allowances require validation against usage and supplier quotes.

Conservative

Financials (\$ US)	2027	2028	2029
Consumer revenue	42,000	210,000	840,000
Marketing	20,000	75,000	240,000
Variable service costs	22,000	110,000	440,000
Fixed operating costs	30,000	75,000	200,000
Total expenditures	72,000	260,000	880,000
Operating result	(30,000)	(50,000)	(40,000)

Realistic

Financials (\$ US)	2027	2028	2029
Consumer revenue	210,000	1,050,000	4,200,000
Marketing	100,000	400,000	1,500,000
Variable service costs	60,000	300,000	1,200,000
Fixed operating costs	60,000	200,000	600,000
Total expenditures	220,000	900,000	3,300,000
Operating result	(10,000)	150,000	900,000

Optimistic

Financials (\$ US)	2027	2028	2029
Consumer revenue	420,000	3,150,000	10,500,000
Marketing	150,000	1,125,000	3,750,000
Variable service costs	100,000	750,000	2,500,000
Fixed operating costs	100,000	450,000	1,200,000
Total expenditures	350,000	2,325,000	7,450,000
Operating result	70,000	825,000	3,050,000

Operating results are before tax and financing costs; staffing allowances are included in fixed costs. Referral, licensing, and award income are excluded. In the realistic case, \$10,000 of 2027 operating loss plus working capital must be financed beyond the initial pilot; cash needs depend on when spending and revenue occur.
